**Keywords:** National governance, Modernization goal, Administrative system, Innovation

**Abstract:** In order to further improve methods of China's administrative management and promote the economic development, this paper mainly analyzes the characteristics of administrative system innovation in combination with the goal of realizing modernization of national governance from aspects of systemic governance innovation, source governance innovation and comprehensive governance innovation. It aims to improve the entrepreneurship and innovation system, build a high-quality platform for entrepreneurship and innovation, and realize comprehensive governance.

## **1. Introduction**

With the continuous improvement and development of socialist systems with Chinese characteristics, it is necessary for China to continuously strengthen the national governance system and governance competence in the process of administrative management. In order to fully realize the general goal of the modernization of national governance, it is necessary to continuously optimize China's administrative system to take forward the nationwide initiative spurring entrepreneurship and innovation, and effectively improve the innovative ability from the perspective of administrative system and service level <sup>[1]</sup>.

## **2. Systematic Governance Innovation: Creating a Good Environment for Entrepreneurship and Innovation**

### **2.1 Creating a Favorable Market Environment and Institutional Environment for Entrepreneurship and Innovation**

In order to comprehensively enhance the development prospects of innovation and entrepreneurship, the government needs to continuously reform and attach importance to its own work to effectively improve the ecological service capacity of entrepreneurship and innovation. In order to achieve systematic governance innovation, it is necessary to create a good market environment and institutional environment for entrepreneurship and innovation. First of all, it is necessary to create a good market environment for entrepreneurship and innovation to ensure that the business environment is improved and optimized, and to provide good basic conditions for entrepreneurship and innovation. In creating a good market environment, it must ensure the smooth

operation of the market economy, formulate a fair, just and open competition mechanism, and introduce a scientific and reasonable review system to ensure that the market can operate in an orderly manner. In addition, it also needs to improve the institutional environment. In order to effectively meet the conditions for the development of entrepreneurship and innovation, the government needs to strengthen the innovative ability of market supervision, optimize the prudential supervision mechanism, and establish a "red line stop" system to ensure that the supervision can be effectively implemented.

## **2.2 Improving the Value of Innovation in Environment of Entrepreneurship and Innovation System**

Innovation should be carried out from a systematic perspective in the administrative system. Talent training can effectively enhance social development, provide a steady stream of talents for market development and economic society, and enable the national governance system to obtain more support. And in order to further realize systematic innovation, under the goal of modernization of national governance, China should constantly optimize the administrative system to play a corresponding role in organizational management, and should constantly improve the service ability of administrative management, transform functions from the system, realize the streamlining of administration and decentralization, and further build an innovative government <sup>[2]</sup>.

## **3. Source Governance Innovation: Establishing and Improving a System for Innovation and Entrepreneurship**

### **3.1 Strengthening the Transformation of Achievements**

To achieve the source governance innovation, China need to constantly establish and improve the system for entrepreneurship and innovation. Strengthening the transformation of achievements can effectively improve the transformation efficiency of innovation and entrepreneurship achievements of enterprises, organizations and individuals, so that more innovation and entrepreneurship projects can be developed. In order to further establish and improve the system for entrepreneurship and innovation, it is necessary to realize the source governance innovation. The government and other relevant departments should formulate relevant laws for the intellectual property rights of various innovation and entrepreneurship projects to ensure that the intellectual property rights are not infringed. In addition, they should publish relevant protection systems and scientific research achievements transformation systems to ensure that the relevant achievements of entrepreneurship and innovation projects are effectively protected by laws. Furthermore, in terms of transformation of scientific and technological achievements, by establishing and improving the system for entrepreneurship and innovation and strengthening the transformation of achievements, it is necessary to improve the development model of traditional industries and provide more policy support for emerging industries to effectively achieve governance innovation from the source.

### **3.2 Effectively Realizing Innovation of Entrepreneurship and Innovation System**

Source governance can effectively guarantee the innovation of the entrepreneurship and innovation system. By carrying out the source governance, it can effectively purify the bad market competition situation, effectively govern the market, and create a good market competition environment. Source governance is the guarantee to effectively realize the innovation of entrepreneurship and innovation system, which can provide multiple guarantees at the institutional level and service level for the development of entrepreneurship and innovation, ensure the

transformation of achievements, and improve the ability of risk management and emergency management. It is one of the important ways of national governance <sup>[3]</sup>.

## **4. Comprehensive Governance Innovation: Building A System Platform for Entrepreneurship and Innovation**

### **4.1 Exploring the Platform-based Innovation Practice of the Entrepreneurship and Innovation System**

In order to comprehensively build a system platform for entrepreneurship and innovation, it is necessary to realize comprehensive governance innovation. Thus, it is necessary to continuously explore the innovation and entrepreneurship system, and further enhance the innovation and practice ability of the administrative system. As a continuous and dynamic project, the platformization of the entrepreneurship and innovation system needs to be supported by the government and all sectors of society. Relevant innovative and entrepreneurial institutions and organizations must continuously improve their own level and capabilities, so as to improve China's entrepreneurship and innovation system platform. When building a system platform for innovation and entrepreneurship, China should start from a comprehensive perspective, open green channels to facilitate innovation and entrepreneurship, strengthen innovation and entrepreneurship activities to provide more opportunities for enterprises and individuals, and create a culture of innovation and entrepreneurship. platform to ensure that the maker space is optimized and promoted. In addition, China also need to improve relevant management mechanisms, support and connect the real economy, and build an Internet economy to effectively crate a good innovation ecological environment.

### **4.2 Realizing the Innovation of Comprehensive Governance System under the Promotion of Innovation and Entrepreneurship Platform**

In order to further improve the system of entrepreneurship and innovation, comprehensive governance methods can be used to further realize the innovation of comprehensive governance system under the promotion of entrepreneurship and innovation platform. By constantly improving the platform for entrepreneurship and innovation resource sharing and constantly changing and updating the platform of comprehensive system, it can effectively expand the professional capacity of the platform, ensure that the platform for entrepreneurship and innovation services is optimized and expanded, and effectively make up for the institutional deficiencies by adopting comprehensive governance means. In addition, by carrying out comprehensive governance methods, it is possible to strengthen the docking ability of related businesses on the entrepreneurship and innovation platform, improve service efficiency and guidance capabilities, so that the entrepreneurship and innovation work can be improved, and the related governance work can develop in a more systematic and efficient direction <sup>[4]</sup>.

## **5. Conclusion**

In order to effectively promote the development of entrepreneurship and innovation and improve the vitality and influence of the national economy, relevant departments should constantly create a good entrepreneurial environment. By carrying out systematic governance innovation, China can create a good market environment and institutional environment for entrepreneurship and innovation, and comprehensively demonstrate the innovation value of the system environment for entrepreneurship and innovation. And it should carry out the source governance innovation,

establish and improve the system for entrepreneurship and innovation, strengthen the transformation of achievements,so as to effectively realize the innovation of entrepreneurship and innovation system. What's more, it needs to carry out comprehensive governance innovation, explore the practice of entrepreneurship and innovation system platform, and realize the innovation of comprehensive governance system. By adopting the above methods, China will actively promote the reform and innovation of policies and systems, effectively and timely solve the problems in the work of entrepreneurship and innovation, and promote the all-round development of China's economy.
