Abstract: The education system of practicing education is a basic content of college students' ideological and political education. It is conducive to the improvement of students' ideological and political realm level, promotes the development of college students' morality, and can also enhance college students' practical ability and social value, and cultivate more outstanding talents for socialist modernization. Based on this, this paper makes a simple analysis of many problems in the ideological and political education mode and its value.

1. Introduction

The ideological and political education of colleges and universities has an important influence on the ideological and quality level of college students. However, this influence in contemporary ideological and political education in colleges and universities is constantly weakened. College students have experienced a serious resistance to this kind of ideological and political learning. This is one of the biggest problems in the current ideological and political education in colleges and universities. This requires us to improve from the perspective of college students, the traditional infusion of teaching methods, so that students' enthusiasm and passion are greatly reduced, we need to transform the corresponding teaching methods, more combined with practice, try to avoid pure theory. It is boring and combines ideological and political education with the development of students themselves^[1].

2. College Ideological and Political Education Practice Education Mode

This kind of teaching is produced in the context of the combination of theory and practice in the concept of reform of the big political policy. Integrating the teaching of ideological and political education into the daily ideological and political education and management of colleges and universities, we must combine theory with practice, and combine tradition with innovation. This is the education and teaching system of Dasizheng. However, the educational model that combines the three aspects of ideological and political theory, intramural training practice and off-campus practice is the mode of ideological and political education practice in colleges and universities. As shown in Figure 1 below, it is the development trend of China's masses after actively participating

in global health governance and fulfilling the international commitments of the 2030 Agenda for Sustainable Development:

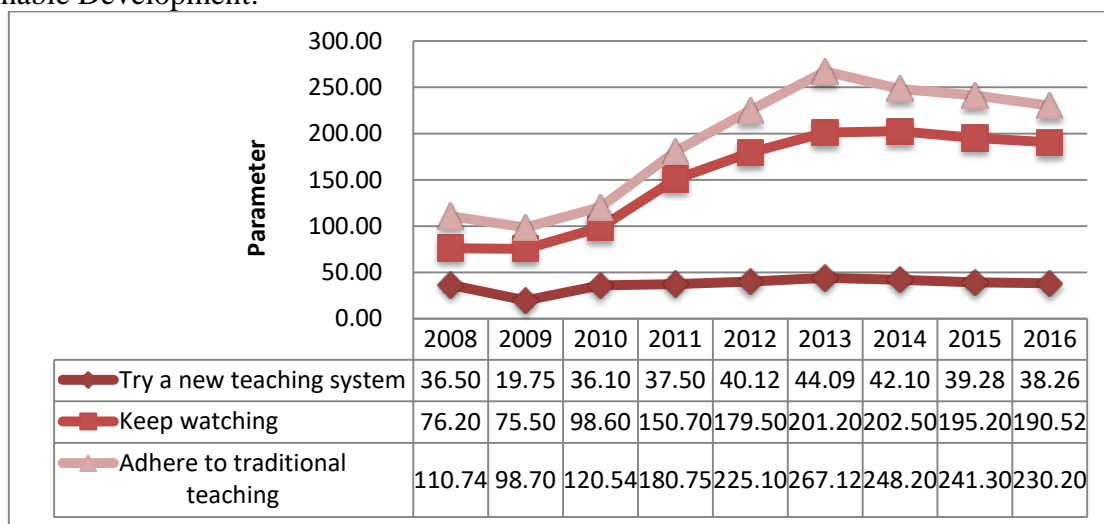

Fig.1: The integrated development of ideological and political education resources under the guidance of Da Si's political outlook

However, it can be found from fig 1 that the two main aspects of the school are the ideological and political theory class and the practice in the school. Both of them are explicit and implicit education for students in the form of classroom teaching. The difference in social practice outside the school is that it also has the leading role of society. School teachers serve as a guide and practice teaching as a means to educate students and achieve educational goals^[2].

3. The purpose of educating people in the ideological and political education in colleges and universities

3.1 Promoting college students to gradually return to social practice from theory

The practical direction of ideological and political education is life. The so-called return of college students to life is to continuously return to the various life of the school in the process of growing up into talents, to adapt to the needs of social development. In the return to practice, one of the most important aspects is the school's learning life. In the process of learning, we constantly infiltrate the knowledge of practice, carry out the construction of excellent classrooms and excellent courses, and constantly let college students feel the employment of the society. Dormitory is an important place for the school^[3].

3.2 Returning the values of college students to rationality

Under the influence of globalization, the problem of value orientation and the change of its ideology appear in the thinking of college students. In order to solve these problems, the ideological and political education in colleges and universities under the vision of Da Sizheng is the most effective solution. It can improve the ideological and political quality of college students and promote the rationalization of their values. First of all, this kind of education model regards the ideological and political theory course as the main way of educating people, and solves the problems existing in the thinking of college students so that the creativity and appeal of the party's ideological and theoretical work are continuously enhanced. Secondly, this model has been

combined with some college students' daily ideological and political education activities to resist the bad culture of the West with a healthy culture^[4].

4. The value of educating people in ideological and political education in colleges and universities

4.1 Integrate educational resources to achieve a combination of theory and practice

The ideological and political education in colleges and universities has diversified characteristics, which are reflected in the theory teaching as well as in practice. For example, those ideological and political education activities or public welfare activities carried out in the community continue to fully integrate theory and practice in the course of activities.

4.2 Optimize the ideological and political education environment, so that college students have a better ideological environment

The environment for the practice teaching of ideological and political education is related to its teaching, and it is an idea to promote the concept of combining theory with practice. Under the vision of big thinking, the practice of ideological and political education includes many environments such as school environment and social environment, and more attention should be paid to the combination of family and social environment. Table 2 below shows the acquisition of ideological and political education by different students in the Dasi government view:

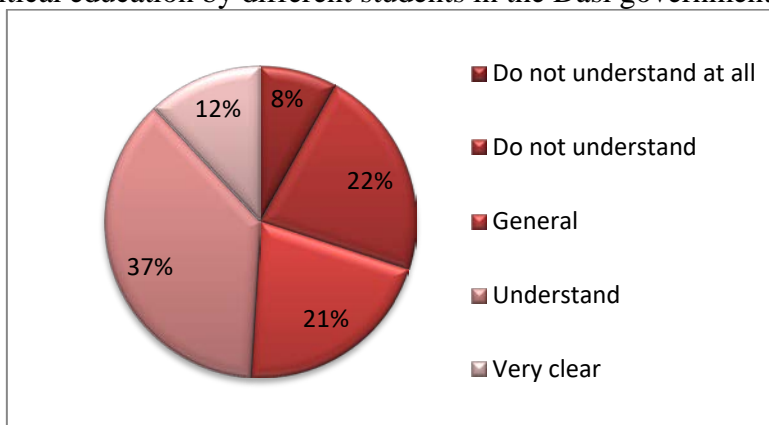

Fig.2 The situation of different students' ideological and political education on Da Si's political outlook

As shown in fig 2 above, practical teaching should also pay attention to the relationship with economic culture. Only in this way can a better educational environment be created^[5].

4.3 Improve the way of ideological and political education, so that subjective initiative can be fully exerted.

The way to improve and strengthen ideological and political education is a matter of the whole society, and it is not something that one can do. For example, lectures on ideological and political education conducted by some famous people in the society have paid attention to and support people in society. In school, it can also be combined with the environment outside the school to learn from each other, promote the shaping of students' personality, and make full play of the main role of college students. It is an important talent for college students to become socialist modernization.

5. Conclusions

The ideological and political education under the vision of Da Sizheng is the improvement and improvement of traditional ideological and political education. It will combine the theory with the reality to a greater extent, and will consider more issues from the perspective of students' own development and strengthen their thinking. As the management of colleges and universities, we must pay attention to the ideological and political education in colleges and universities from the perspective of big thoughts and politics. This model is conducive to the high-effective study of contemporary college students from the useless study of pure theory and the practice, and can better improve the thinking of college students. The quality level provides better talents for socialist modernization and promotes the good development of society. We must change the problems existing in the ideological and political education of colleges and universities in our country and avoid the influence of ideological and political education.
